

For an advanced, user-friendly access control system, AEOS Professional is the perfect choice. It is easy to manage who has access to which areas and you are informed immediately if something is wrong. Thanks to the embedded web server, which enables remote management, you don't need to purchase and install software – so you save time and money. With AEOS Professional you can start small and expand your system smoothly without having to pay over the odds.

A clear-cut solution

With AEOS Professional those cumbersome bunches of keys and the tedium of managing them becomes a thing of the past. You simply specify when and where each individual employee has access to the building, and you can closely monitor how badges are actually used.

A user-friendly solution

Fast and reliable recognition of authorised badges: that's what AEOS Professional is all about. AEOS Professional ensures that doors open quickly and automatically, but only for authorised personnel.

A "Plug & Play" solution

Because AEOS Professional uses a web server, there is no need to install software. After assembly, which is simple and straightforward, it can be activated from any PC with a web browser. You can then immediately get it up and running and configure it to your requirements.

A high-quality solution

AEOS Professional offers you the mobility of the internet: access and control via IP technology. For example, you can monitor events as they happen or receive an alarm signal by email or via SMS. The professional management software can be accessed from any PC or PDA equipped with a web browser.

Access control "out of the box"

Simple: Using your PC's web browser, you specify who has access to which area and AEOS Professional does the rest.

Safe: Lost badges can be blocked immediately. You can see at a glance who has had access (and at what time), or who has tried to gain access. If something is wrong, you are alerted immediately by email or via an SMS message*.

Flexible: You can change the access rights of individuals via a standard web browser on any PC. You can start small and smoothly expand your system to include more doors or functionality as and when you wish.

Affordable: AEOS Professional is competitively priced. Thanks to its modular hardware and software structure, you only pay for what you actually use.

Keep track of who has access to your business...

You want insight into – and control over – precisely who has access, to which areas, and at what times, in order to ensure a secure working environment and protect valuable equipment and confidential data.

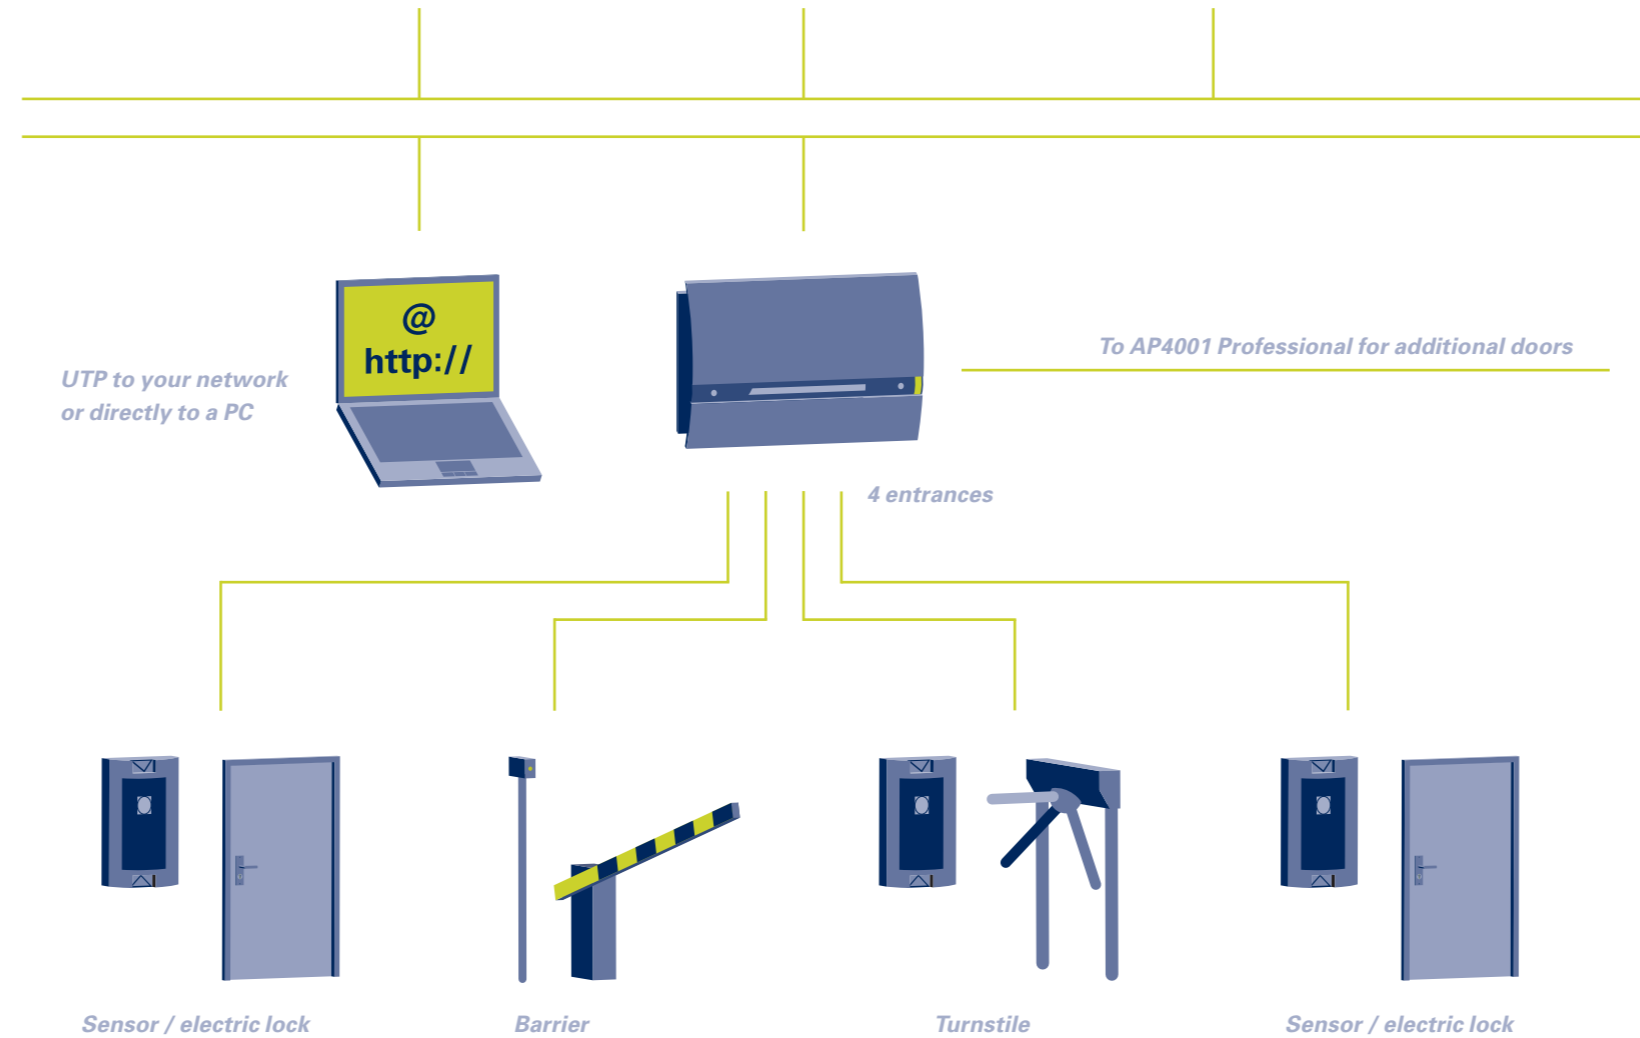

...without the hassle of a complicated access control system

You don't want yet another installation with a complex infrastructure and components that you will never use but have to pay for nevertheless, for which someone has to be trained, and which will leave you vainly searching for information when problems arise.
